

Fartcoin

Official Whitepaper

\$FART · Solana

Serious Infrastructure for Unserious Capital.

Serious Infrastructure for Unserious Capital

Fartcoin is a next-generation decentralized digital asset designed to facilitate the efficient creation, storage, and transfer of gas-powered economic value across global markets.

The Macro Problem

Modern financial systems face inflation. Central banks create currency at will. Humans, however, can only create gas according to biological constraints. This establishes a naturally verifiable limit on monetary expansion.

The Protocol Solution

By leveraging Solana's high-throughput architecture and our proprietary Proof-of-Gas (PoG) consensus, we establish a trustless ecosystem where value is emitted rather than synthesized. The future of finance is not built; it is released.

Core Utility Directive

Fartcoin converts attention, community coordination, and meme velocity into an open market instrument. Holders coordinate to fund campaigns, sponsor cultural artifacts, and organize public attention around a shared, fundamentally gaseous brand.

Cryptographic Validation Framework

The Fartcoin network utilizes a multi-factor validation framework to ensure network integrity and prevent Dietary Manipulation Attacks (DMA) or chemical spoofing.

Acoustic Signature Verification – Proof-of-Gas (PoG)

Standard PoG emissions rely on public atmospheric data. The decentralized oracle network aggregates emission velocity, density metrics, and acoustic resonance to validate block creation.

6.9s BLOCK TIME	Insta FINALITY	T.P.S. TECH. POSSIBLE SMELLS	1.5% NETWORK FEE LOOP
--------------------	-------------------	------------------------------------	--------------------------

Silent but Deadly (SBD) Protocol – zk-SNARKs

For high-net-worth individuals requiring privacy, Fartcoin implements advanced zero-knowledge cryptography (zk-SNARKs) to suppress acoustic noise metrics while cryptographically validating the structural chemical properties of the transaction.

```
> init_sbd_transaction()
> generating zk-proof...
> validating chemical payload... OK
> suppressing acoustic resonance... OK
> transaction emitted to 0x000...BURNTGAS
```

The "Cake" Distribution

Fartcoin implements a strict fixed distribution of exactly 69,000,000,000 \$FART. The tokenomics are designed to heavily favor the community, ensuring decentralized governance over odor markets.

Deflationary Mechanic: 0.5% permanent token burn to 0x000...BURNTGAS on all on-chain emissions.

Market Dynamics

Historical velocity and atmospheric saturation levels.

\$0.1842 ALL-TIME HIGH (ATH)	\$2.63 MARKET METRIC	\$0.000055 LAUNCH PRICE
↓ 93% FROM ATH	↑ 334,800% ROI	10.2% WHALE CONCENTRATION (TOP WALLET RISK)

Figures reproduced from the source page.

Strategic Rollout Plan

From initial vapor phase to total atmospheric saturation.

○ Phase 1: The Vapor Phase ACHIEVED

Pump.fun bonding curve launch, establishment of brand standards, and deployment of initial community channels. Origin connection to Truth Terminal AI experiment established.

○ Phase 2: Odor Expansion IN PROGRESS

Deployment of creator grants, analytics dashboards, and CEX listings (Kraken, KuCoin, MEXC). Fortification against narrative decay.

○ Phase 3: Liquidity Pressurization

Deep liquidity venue expansion, advanced trading tool integrations, and initial exploration of cross-chain emissions (bridging).

○ Phase 4: Atmospheric Saturation

Full community governance over the emission treasury, cultural archives deployment, and global recognition of gas-backed capital.

OFFICIAL DOCTRINE

"Hot air rises."
